

- **Status:** exploration permit.
- **Participation:** 100% OIL & GAS CAPITAL S.L.
- **Date of permit:** 19 April 2013.
- **Area:** 40,260 hectares.
- **Place:** Murcia and Castilla-La Mancha.
- **Basin:** Baetic Ranges, Internal Prebetic zone.
- **Hydrocarbon expectations:** oil and gas.
- **Reservoir:** Cretaceous sandstones and carbonates and Jurassic limestones and dolomites.
- **Seal:** intraformational Jurassic and Cretaceous shales.
- **Trap:** anticlinal and diapiric domes.
- **Source rock:** Lias, Kimmeridgian and Neocomian shales, evidenced by oil and gas shows found at Ascoy-1, Sierra Larga-1 and Rio Segura G-1.
- **Exploration potential:** high.
- **Exploration risk:** medium to low.
- **Research depth:** 2,000 to 3,000 metres.
